

MAKE A GREAT IMPRESSION WITH CADENT ITERO™!

If you've ever had to have an impression of your teeth made for a crown or bridge, you'll remember all too well the messy, unpleasant putty that was put into your mouth, and the uncomfortable tray, disagreeable taste and possible gagging involved in taking the impression. Luckily, modern technology now allows us to bypass this old system, which has been replaced by a new, less invasive 3-D digital scanning system that we can now use for all our scanning needs, including Invisalign® ("invisible braces") preparation too!

We're very pleased to introduce our Cadent iTero™ digital impression system to you. With Cadent iTero™, we can take highly accurate digital impressions without the uncomfortable tray and putty, allowing you to spend less time in our office, and more time enjoying your new smile!

All we have to do is touch your teeth with the hand-held wand, and the digital impression is complete in just three to five minutes instead of the eight to ten minutes for conventional impressions. In addition to the quick, mess-free benefits, the 3-D images result in greater accuracy for your crown, bridge or Invisalign® orthodontic appliance.

If you ever find yourself needing a crown or bridge, or a scan for Invisalign® orthodontic treatment, you can relax, knowing how easy it will be to create just the right impression!
